Experience

CVS Health

Software Engineer | Health Agent AI Team

2026-Present

HAIO (Health All in One), the patient-facing AI health assistant in the H100 (Health100) app.

- Built end-to-end logging, tracing, and session-visualization tooling for HAIO, giving developers a unified view to diagnose failures across **seven H100 agent services**.
- Redesigned HAIO's monolithic response architecture around **parallel domain specialists**, enabling targeted quality improvements through independent tuning, evaluation, and rollout controls.
- Cut HAIO welcome-response latency by approximately **16.5 seconds** while preserving expected behavior.

Software Engineer | API Scheduling Team

2024-2026

APIs and data flows powering appointment scheduling across CVS Health's in-person and virtual care services.

- Built APIs and data flows that helped patients find suitable appointments by surfacing available dates and ranking providers by earliest availability or distance.
- Reduced repeated data entry in virtual-care journeys by carrying preferred-pharmacy selections from scheduling into confirmation and rescheduling.
- Reduced security exposure across **14 scheduling codebases** by remediating Snyk/SCA vulnerabilities and upgrading affected dependencies.
- Migrated CI workflows across **10 service codebases** to GitHub Actions and coordinated a UAT release wave covering **11 services**.
- Enabled engineers to trace patient requests across scheduling services and pinpoint the source of failures.
- Cut an appointment test group's runtime by **97%**, from **185 seconds to 6 seconds**, shortening feedback on scheduling changes.
- Consolidated and corrected shared encryption utilities, removing duplicate security-sensitive code.

CVS Health | Digital Engineering Intern

May-August 2023

- Built a self-service metrics dashboard that enabled leadership to find and export data independently, replacing manual requests to developers.

Technical Skills

Languages and applications: Java, Python, TypeScript, JavaScript, SQL, Spring Boot, FastAPI, React, REST, GraphQL
Security and delivery: Snyk, software composition analysis, GitHub Actions, Harness, Argo CD, Kubernetes
Data and observability: MySQL, PostgreSQL, Cassandra, Redis, Kafka, Splunk, OpenTelemetry

Education

Florida State University | Bachelor's Degree in Computer Science | 2024
